Get Back On Your Feet Faster With Arnipatch, The Touch of Relief

Discover the New Technology that Targets Pain and Inflammation with Arnica Extract.

(IRVINE, CA) FEBRUARY 2025 - According to a recent study by Cigna Healthcare,¹ more than half of American adults suffer from chronic musculoskeletal conditions such as arthritis, lower back pain, and neck pain. It could be that this pain causes the 31 million Americans who are 50 years or older to be inactive, which costs our nation \$117 billion in annual health care.

While most pain relief solutions from OTC drugs to patches, gels and creams can relieve minor aches and pains temporarily, their ingredients can irritate the stomach as well as the skin, leave a sticky residue, and / or wear off quickly.

Finally, there is a scientifically-tested solution to provide relief to the 242 million Americans, per Sports Destination Management, nearly 80% of all Americans 6 years and older, to continue to participate in at least one sport or fitness activity. [LaboFlex's Arnipatches](#) are the newest non-toxic solution to address these challenging conditions and help keep Americans active.

LaboFlex's Arnipatch natural hydrogel pain patches provide a soothing, long lasting, homeopathic solution for those trying to manage their muscle and joint pain. Unlike other OTC analgesics that contain chemicals for topical pain relief, LaboFlex's Arnipatch unscented hydrogel pain patches utilize Arnica Montana 1X HPUS to soothe sore aching joints while hydrating and protecting the skin.

Due to the unique structure, LaboFlex's Arnipatch hydrogel patches can help provide pain relief for up to 12 hours, while hydrating, and protecting the skin as it soothes chronic pain. LabottachCo, the maker of LaboFlex Arnipatch carefully formulates each of their ingredients and conducts numerous clinical studies to validate the efficacy and safety of their products.

"We are dedicated to utilizing advanced technology to manufacture products that are innovative, safe, effective, and well – made", states LabottachCo. CEO, Mr. Nam. Manufacturing facilities of LabottachCo are located in South Korea and Slovenia.

Each LaboFlex Arnipatch hydrogel pain patch is designed with a three-layer technology to hold moisture, provide cooling relief, and moisturize the skin while in use. And work instantly by attaching directly to the painful area while keeping the skin protected from environmental exposure.

“The beauty of the LaboFlex Arnipatch hydrogel pain patches is that they are designed to stay in place while providing pain relief and not wear off like other Arnica gels or creams that are simply applied to the skin by hand, says,” Mr. Nam, CEO of Wooshin Labottach Co., Ltd, the maker of LaboFlex Arnipatch.

Mr. Nam adds, “Our LaboFlex Arnipatch hydrogel pain patches contain naturopathic ingredients like Arnica to provide healing relief while moisturizing and protecting the skin”. “Other pain patch companies use chemicals like lidocaine or menthol as their healing ingredient, which has been shown to irritate the skin²”, says Mr. Nam. “Our mission is to consistently develop outstanding health and beauty technology and products for a healthier, happier life through originality, imagination, and innovation We are here to help keep America active and free from muscle and joint pain, naturally.”

LaboFlex’s Arnipatch hydrogel pain patches are available for sale on [Amazon.com](https://www.amazon.com) and [LaboFlex Shop](https://www.laboflexshop.com).
