Spring Forward with Arnipatch for Pain Relief in Muscles and Joints

Discover the new technology that soothes musculoskeletal pain and inflammation.

(IRVINE, CA) MARCH 2025 – Springtime is the nation’s most-loved season of the year, and now that it’s sprung, Americans are most looking forward to the warmer weather, longer days – as well as beginning to think about spring cleaning, gardening, and other outdoor activities¹.

In fact, exercise activity among American adults average 15-20% higher during the spring and summer months². For many people increasing the length, type, or intensity of an activity can result in an exertion injury that can cause inflammation, bruising, muscular and joint pain to the affected area.

Topical pain relief products, like gels, creams, and patches, are growing in popularity due to their targeted application and reduced systemic side effects. According to market research, the global topical pain relief market is projected to reach \$13 billion by 2027, driven by consumer demand for safer, more convenient alternatives to oral medications.

LaboFlex Arnipatch hydrogel pain patches offer a unique, natural relief option for alleviating musculoskeletal and chronic pain for up to 12 hours.

Each LaboFlex Arnipatch unscented hydrogel pain patch is infused with Arnica 1X HPUS, a powerful herbal analgesic that has been proven to help relieve muscle and joint pain more naturally.

Each LaboFlex Arnipatch hydrogel pain patch is designed with a three-layer technology to hold moisture, provide cooling relief, and moisturize the skin while in use. And work instantly by attaching gently to the painful area while keeping the skin protected from environmental exposure.

Due to the unique structure, LaboFlex’s Arnipatch hydrogel patches can help provide pain relief for up to 12 hours, while hydrating, and protecting the skin as it soothes chronic pain. LabottachCo, the maker of LaboFlex Arnipatch carefully formulates each of their ingredients and conducts numerous clinical studies to validate the efficacy and safety of their products.

LaboFlex's Arnipatch natural hydrogel pain patches provide a soothing, long lasting, homeopathic solution for those trying to manage their muscle and joint pain without the side effects that can occur from lidocaine or menthol pain patches as well as OTC medications that can cause digestive tract and stomach issues.

"The benefit of LaboFlex Arnipatch hydrogel pain patches is that they are designed to provide pain relief for up to 12 hours as compared with other arnica gels and creams that tend to wear off very quickly", says Mr. Nam, the CEO of LaboFlex Arnipatch. He continues, "Other pain patches typically contain chemicals like Lidocaine or Menthol which can irritate the skin in the affected area, which can exacerbate pain and discomfort." Mr. Nam adds, "Each LaboFlex Arnipatch hydrogel pain patch is designed to gently adhere to the skin, while providing soothing relief and protecting the skin from environmental exposure."

LaboFlex's Arnipatch natural hydrogel pain patches provide a comforting long lasting, homeopathic solution for more effective management of muscle and joint pain.

Manufacturing facilities of LabottachCo are in South Korea and Slovenia.
